# Tape coater type FAS (table model)

Tape coater (table model) for applying adhesive on the tape for the manual production of endless abrasive belts with tape joints. The tape coater is perfectly suited for pre-coated and uncoated tapes.

Tape coater type FAS  
table model mounted on mobile carriage

- » Table model mounted on mobile carriage
- » For tape widths up to 30 mm
- » For pre-coated tapes and for gluing uncoated tapes
- » Tape rolls up to ø300 mm
- » Simple glue application system with removable adhesive container in different sizes
- » Drying of the tape with two drying stretches with a heating length of 450 mm each and air-blowers
- » Feeding motor for pulling the tape through the machine
- » Scissor for cut off the tape

Tape coater with adhesive container

Cutting head

## Tape coater

- Simple glue application system with removable adhesive container in different sizes.
- Display to set the desired glue application.

## Drying stretches

- Drying of the tape with two drying stretches with a heating length of 450 mm each and air-blowers.
- Covers for the drying stretches.  
The plates are covering the heating elements as long as after the preselected time the tape coater does not feed the tape. This to prevent damage to the inserted tape under the heating element. The time can be changed in the PLC by an authorized person.

## Additional features

- Scissor for cut off the tape.  
Including a vacuum system to hold the tape in position before the operator cut the tape.
- Feeding motor for pulling the tape through the machine (adhesive container, heaters ...).
- Sensor for starting the tape feeding automatically if the material storage is over soon.

## Options

- Set of additional guide rolls for other tape widths  
(please indicate the needed width).
